Allowable Subject Matter

1. Claims 1-8 are allowed.

2. The following is an examiner's statement of reasons for allowance: The present invention is directed to a pest deterrent device. Each independent claim identifies the uniquely distinct features "a trigger circuit electrically coupled to the sensor, the trigger circuit providing a triggering signal having a first polarity in response to a triggering event, the trigger circuit activating a load during the triggering signal, the triggering signal being coupled to a summing junction through a capacitor as positive feedback" and "a negative feedback path electrically coupling an inverse triggering signal to the summing junction to discharge the capacitor and turn off the triggering signal following the triggering signal, the lockout signal being coupled to the summing junction through the capacitor as positive feedback and an inverse lockout signal being coupled to the summing junction as negative feedback to lock out the load until the lockout signal is turned off after a lockout period". The closest prior art, Rodhall et al. (US 5,463,595) teaches a first alarm generator for producing an alarm for a predetermined period when intrusion detected, then checking for repeated detection signal, Handley et al. (US 5,898,368) teaches a lockout means which functions to inhibit during a predetermined time after a first alarm detection signal, any further alarm detection signals from being transferred, either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
